About me

I have been working in IT since 2003. I started my career as a designer, creating 3-D models, but eventually moved into system administration, where I built my career until 2017. In 2017 I began developing as a DevOps engineer. I possess knowledge and experience across a wide range of technologies; my main focus is automation and the adoption of **Infrastructure as Code** and **GitOps** methodologies. The tools and practices I use most frequently are CI/CD pipelines on **Jenkins** and **GitLab CI**, **Docker**, **Kubernetes**, **Helm**, **Terraform**, **Ansible**, and **ArgoCD**.

I have been administering Kubernetes clusters since 2020, and I also work regularly with databases such as **PostgreSQL**, **MySQL**, **MongoDB**, **ClickHouse**, and **Redis**. I set up a bare-metal Kubernetes cluster in HA mode on 5–8 nodes, fully built the CI/CD process in Kubernetes—from application build to deployment via Helm—and configured the entire infrastructure personally from scratch.

I have experience with cloud providers (Yandex Cloud, VK Cloud, Selectel, SberCloud, **AWS**, **GCP**, **Azure**) and various managed services, notably **AWS EC2**, **ECS**, **IAM**, **RDS**, **Route53**, and I have managed network configurations and policies.

I have administered Linux distributions including **CentOS**, **Fedora**, **Debian**, **Ubuntu**, **openSUSE**, **Rosa Linux**, **AltLinux**, **Red OS**, **Astra Linux**, and **Arch Linux**. I built my own packages—.deb, .rpm, **AUR**; configured networks; organized private encrypted networks (OpenVPN+IPsec); set up web servers using **nginx + php-fpm + MySQL**; wrote systemd units; and automated tasks with **Bash** and **Python**.

I am passionate about programming. I have front-end development skills in **React** and am proficient with **HTML**, **CSS**, **SCSS**, **htmx**, **Tailwind**, and **Bootstrap**. On the back-end I use **Python**, have worked with the frameworks **Django**, **Flask**, and **FastAPI**, and I am familiar with OOP and ORM concepts.

I have also studied **Java**, **Go**, am familiar with **C** and **C++** syntax, write in **JavaScript** and **TypeScript**, and have experimented with **Swift** and iOS development.

I am interested in machine learning and know frameworks such as **PyTorch**, **TensorFlow**, and **Keras**. I have experience setting up **Apache Airflow** and writing my own DAG pipelines (notebooks).

I have built DevOps infrastructure from the ground up, including Kubernetes cluster setup, Vault integration, deployment of **Jenkins + Jenkins Template Engine**, **Keycloak**, **Nexus3**, and repositories for **NuGet**, .deb, .rpm, Raw, **GitLab CI**, and **SonarQube**. I write Helm charts and assist in developing Kubernetes operators in **Go**.

EXPERIENCE

08/2023 - 06/2025	DevOps Engineer ClearWay Integration • Developed and implemented CI/CD pipelines in GitLab CI to automate software delivery. • Performed the installation, configuration, and ongoing administration of Jenkins from scratch. • Created standardized CI/CD pipelines using the Jenkins Templating Engine (JTE) to embed best-practice DevOps patterns. • Deployed, configured, and managed production-grade Kubernetes clusters for container orchestration. • Set up deployment and administration of HashiCorp Vault for centralized and secure secret management. Technical Environment: Kubernetes Jenkins (JTE) GitLab CI/CD HashiCorp Vault Linux
11/2020 - 04/2022	DevOps Engineer TechnoDiasoft • Full automation: Developed and maintained CI/CD pipelines in Jenkins (Groovy) and introduced container orchestration on Kubernetes/OpenShift to improve DevOps practices. • Backend development: Created a Python application for data aggregation that interacted with the Bitbucket REST API to collect and process commit metadata. • Data processing & architecture: Implemented algorithms for sorting, data serialization, and asynchronous operations using AsyncIO and Celery. • Database management: Designed the database schema and built data-access layers with SQLAlchemy ORM on a PostgreSQL DBMS. • Infrastructure as Code (IaC): Automated Kubernetes deployments by authoring Helm charts and Docker images to containerize the application. Technical Environment: Kubernetes / OpenShift Jenkins (Groovy) Helm Docker Python (AsyncIO, Celery, SQLAlchemy) PostgreSQL BitBucket REST API Linux

01/2020 — 10/2020	DevOps Engineer New Cloud Technologies • End-to-end CI/CD pipeline: Designed and implemented an end-to-end CI/CD pipeline for the “My Office” application using Jenkins, significantly automating the software delivery process. • Complex Jenkins pipelines: Developed and maintained complex Jenkins pipelines (Groovy) to automate build, test, and deployment processes across heterogeneous environments (Linux, Windows, macOS). • Ansible-driven configuration & provisioning: Utilized Ansible playbooks to automatically manage configurations and provision build agents, ensuring consistency and reproducibility of environments. • Infrastructure as Code with Terraform: Managed IaC using Terraform for reliable, version-controlled provisioning of infrastructure. • Prometheus monitoring: Implemented and configured Prometheus for comprehensive monitoring of build-server resources (CPU, memory, disk I/O) on all platforms, improving system reliability and performance visibility. • Docker containerization: Created and optimized Docker containers for deploying and isolating applications. • Bash automation scripts: Wrote Bash scripts to address various automation and system-administration tasks. Technical Environment: Jenkins, Ansible, Terraform, Docker, Prometheus, Groovy, Bash, Linux, Windows, macOS.
01/2017-12/2019	Devops Engineer Other Companies • End-to-end CI/CD pipeline: Designed and implemented an end-to-end CI/CD pipeline. • Complex Jenkins pipelines: Developed and maintained complex Jenkins pipelines (Groovy) to automate build, test, and deployment processes across heterogeneous environments (Linux, Windows, macOS). • Ansible-driven configuration & provisioning: Used Ansible playbooks to automatically manage configurations and provision build-agent machines, ensuring environment consistency and reproducibility. • Infrastructure as Code with Terraform: Managed IaC using Terraform for reliable, version-controlled provisioning of infrastructure. • Docker containerization: Created and optimized Docker containers for application deployment and isolation. • Bash automation scripts: Wrote Bash scripts to address various automation and system-administration tasks. Technical Environment: Jenkins, Ansible, Terraform, Docker, Prometheus, Groovy, Bash, Linux

2003-2016	System Administrator Other Companies
-----------	--

EDUCATION

CERTIFICATES

06/2021 - Present	Python Programming Netology - Test knowledges about programming on Python
01/2019 - Present	Swift programming Udemy - Finished Lessons about Programming on Swift
01/2019 - Present	Java Advanced Udemy - Finished Lessons about Java Advanced

SKILLS

Web Development	Java Programming	Linux Administrate	Docker
C/C++ Programming	golang programming	CI/CD	Kubernetes
NodeJS Programming	Python programming	DevOps	Terraform

LANGUAGES

Russian: Native

English: Intermediate
